

Video widget

Add video to your page

Are you uploading or embedding?

If you want to add video to your site from YouTube, Vimeo or similar sites, you are embedding the video. You can use the video widget or embed widget for this.

If you want to add a video file to your site from your local hard drive you are uploading the video.

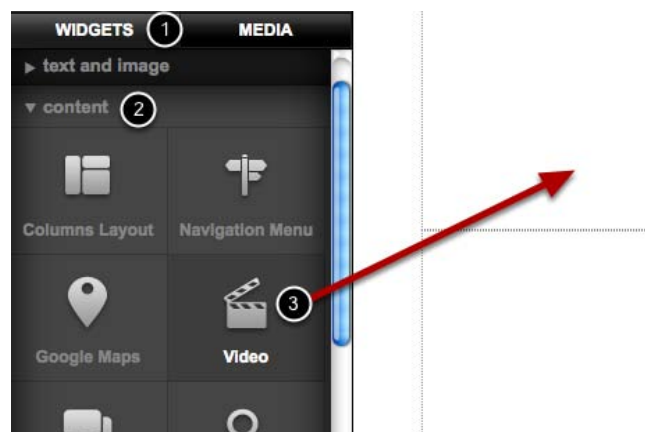

You need to upload the video file from the Files tab. See: [Uploading a file](#)

Do you need the Video widget or the Embed widget?

```
<iframe width="640" height="360"
src="http://www.youtube.com/embed/-REiNFRS7Hw" frameborder="0"
allowfullscreen></iframe>
```

If your embed code for a video starts with `<iframe>` (1) you should use the embed widget. If your embed code starts with `<object>` use the video widget.

Locate the video widget

Click the widgets tab (1) and then click in the Content tab (2). Drag the video widget on to the page (3).

Click and drag to position the widget

Click and drag inside the widget to position it. Click the corner handles to scale the widget.

Get the embed code from YouTube

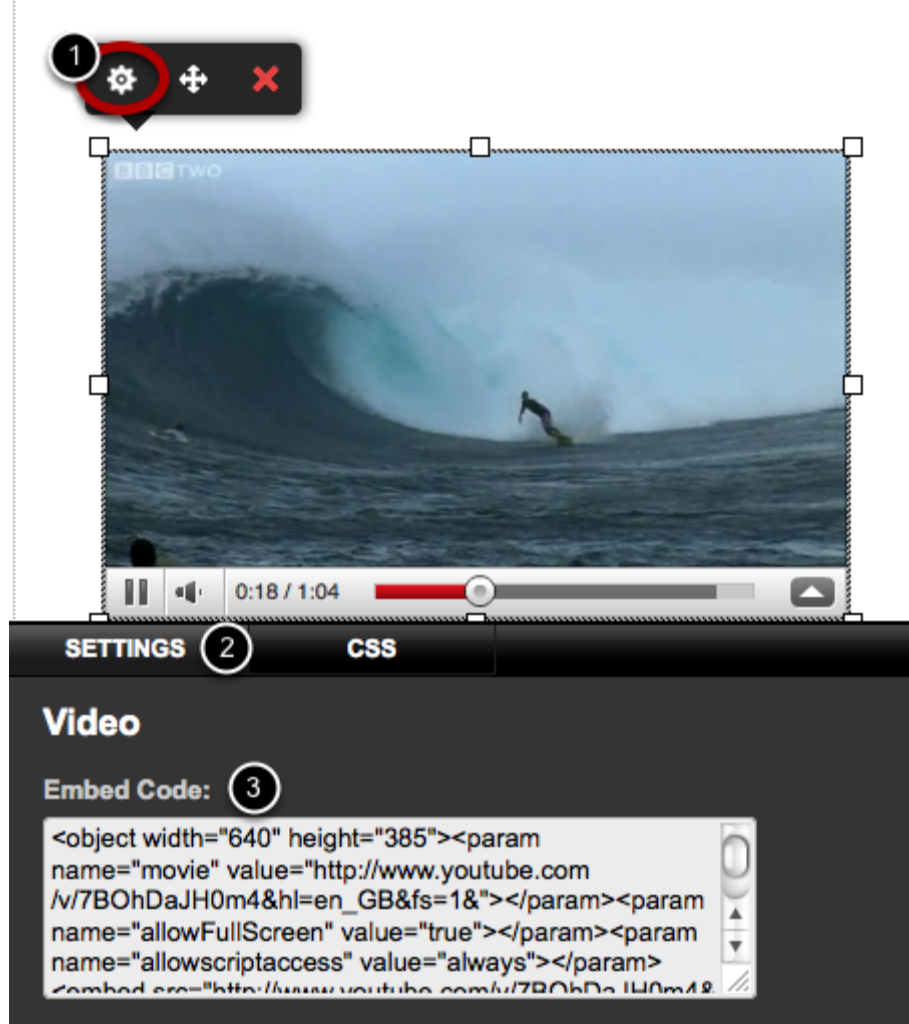

The screenshot shows the YouTube interface for a video. At the top, the video player shows a progress bar at 0:00 / 2:23 and a resolution of 360p. Below the player are buttons for Like, Add to, and Share (circled with a '1'). The video title '11,312' is visible on the right. A text box contains the video URL 'http://youtu.be/-REiNFRS7Hw' with a 'show options' link. Below the URL are buttons for Embed (circled with a '2'), Email, Facebook, Messenger, and a '+1' button. A 'Watch with your friends' button is also present. A large red box (circled with a '5') contains the embed code:

```
<object width="640" height="360"><param name="movie" value="http://www.youtube.com/v/-REiNFRS7Hw?version=3&hl=en_GB"></param><param name="allowFullScreen" value="true"></param><param name="allowsriptaccess" value="always"></param><embed src="http://www.youtube.com/v/-REiNFRS7Hw?version=3&hl=en_GB" type="application/x-shockwave-flash" width="640" height="360" allowsriptaccess="always" allowfullscreen="true"></embed></object>
```

 Below the code is a note: 'After making your selection, copy and paste the embed code above. The code changes based on your selection.' Underneath are several checkboxes: 'Show suggested videos when the video finishes' (checked), 'Use HTTPS [?]' (unchecked), 'Play in HD' (unchecked), 'Enable privacy-enhanced mode [?]' (unchecked), and 'Use old embed code [?]' (checked, circled with a '3'). At the bottom, there are size selection options: '560 x 315', '640 x 360' (selected, circled with a '4'), '853 x 480', '1280 x 720', and 'Customised'. The 'Customised' option includes input fields for 'Width: [] px' and 'Height: [] px'.

1. Click on the **Share** button
2. Click on the **Embed** button
3. Select **Use old embed code**
4. Select a size for your video
5. Copy the code

Open the settings panel

Click the edit icon (1) to open the settings panel (2). Cut and paste video embed code from YouTube, Vimeo or any other video site into the **Embed Code** field (3)
